SUMMARY

I am a frontend developer, proficient with React. I create and developing new user-facing features, determining the structure and design of web pages, building resuable code and using a variety of markup languages to create the web pages. Dedicated to leverage experience with React to impress existing clients and obtain new ones. I will be available for full-time employment.

SKILLS

Languages : HTML5, CSS3, Javascript
Frameworks : React js and Tailwind CSS
Libraries : Redux-toolkit, React Router
Dev Tools : VS code, Git/Github

PROJECTS

- ❖ **Crypto App :** Built with React and **implemented CoinGecko api** to display the coins details and it's present price to be precised in the feature page of the website and It's responsive to all screen sizes. Click here to view the website.

- ❖ **Weather App :** This app is used to search any location in the world, it was built with React and **I fetched data from openweathermap api** to display **temperature range, wind speed, humidity and more.** Click here to see the demo.

- ❖ **Real Estate App :** This is a real estate website where you can buy or rent an apartment. It was built with React, It's **responsive to all screen sizes** and I **utilized react-icons, css grid layout and custom css.** Click here to view the website.
